Internship – Automatic build system (COPR)

Red Hat Engineering team is looking for a student interested in tools for software management tools. You will learn how operating systems are assembled, how software packages are maintained, and how to debug customer issues. You will develop and maintain COPR, a Fedora build service providing package repositories. You will have an opportunity to work on real-life complex issues of our products. You will have a chance to work with skilled engineers every day.

Responsibilities:

- Analyze and solve given tasks
- Root cause analysis and bug fixes
- New features development and testing

Requirements:

- Student in an Information Technology related area
- Knowledge of Linux operating system
- Python programming skills
- Eager to continuously learn new technologies
- Communicative level of English
- Professional communication skills
- Interest in open source software and development

Send your applications with enclosed CVs in English to

Tereza Ticha at tticha@redhat.com.

Please name email “COPR internship”.
