## Internship – Red Hat CloudForms QE

The Red Hat Cloud Quality Engineering team is seeking an intern with Linux and scripting experience to assist with our Quality Engineering efforts in Brno. In this role, you will join an international team of software developers and quality engineers immersed in the latest cutting-edge cloud management technology. You'll primarily focus on validating the Red Hat CloudForms Management Engine, based on the upstream ManageIQ project (a hybrid-cloud virtualization manager), and you will get the opportunity to work with the latest public (Amazon EC2, Microsoft Azure, Google Cloud, ...) and private (Openstack, VMware vSphere, oVirt, ...) cloud virtualization solutions on a daily basis.

### Responsibilities:

- Write and run test automation scripts
- Extend the underlying test automation framework
- Define and execute functional test cases
- Analyze and debug software problems
- Write clear and accurate bug reports
- Cooperate with developers on fixing issues
- Verify submitted bugfixes

### Requirements:

- Basic knowledge of Python or Ruby
- Familiarity with any Linux operating system, its CLI and tools
- Intermediate written and spoken English skills
- Will to learn a lot of new things

### Useful Additional Skills:

- High proficiency in Python or Ruby
- Talent for breaking things
- Knowledge of any of the following:
  - Javascript, Selenium, REST, XPath, Git, KVM, pdb/ipdb, Docker
- Familiarity with virtualization and cloud computing technologies
- Interest in Open Source and Open Source technologies

---

**Send your applications with enclosed CVs in English to Tereza Ticha at [ticha@redhat.com](mailto:ticha@redhat.com). Please name email "CFMEQE Intern".**
