## Internship – Cluster QE

Red Hat Cluster Quality Engineering team is looking for a student interested in automated testing of high-availability environments. Learn how a service can survive total machine failure and happily jump to another one. Working mainly with python and helping us expand service and scenario coverage. The main challenge is to automate existing tools, or write new ones!

### Responsibilities:

- Develop new testing scenarios using common libraries
- Writing new shared libraries/scenarios
- Bring in new ideas (have you seen interesting projects that we could use?)

### Requirements:

- Python programming skills
- Ability and desire to learn new things
- User level experience with Linux
- Shell scripting (BASH)
- Analytic thinking (problem solving skills)
- Ability to write and speak in English
