Internship – Kernel Benchmarking

Kernel Performance team is looking for a student interested into the benchmarking of Linux kernel with the focus on the scheduler testing. We test both upstream and RHEL kernels. You will get access to the most recent HW like NUMA servers with large number of CPUs. You will interact closely with kernel developers and you can potentially build your reputation in the kernel community.

Responsibilities:

- Automate new performance benchmarks
- Develop tools to evaluate the results
- Work with kernel developers to identify the root cause of regressions

Requirements:

- Curious how things work internally
- Python, GIT, C, Bash skills (at least some of them)
- Data analysis and visualization
- Linux kernel experience on user level (compilation, installation) is a plus

Send your applications with enclosed CVs in English to **Tereza Ticha** at tticha@redhat.com
Please name email "Kernel Benchmarking."
