Internship – Messaging QE, Interconnect

Red Hat's Middleware Engineering team is looking for a student interested in middleware messaging and test automation technologies to help us design and improve our test automation. You will learn how to work with Git, Python, C, and much more. You will have an opportunity to work on real-life complex problems and work with skilled engineers every day.

Responsibilities:

- Analyze and solve given tasks
- Develop new test automation and test suites
- Demonstrate new test capabilities
- Produce useful and usable documentation of work

Requirements:

- Pursuing a degree in computer science or related area
- Knowledge of Python - intermediate level
- Knowledge of C - nice to have
- Knowledge of Object Oriented Programming
- User level experience with Linux
- Eager to learn new technologies
- Communicative level of English
- Good communication skills

Send your applications with enclosed CVs in English to **Tereza Ticha** at tticha@redhat.com.
Please name email "MSGQE Interconnect Intern".
