Internship – PnT DevOps Release Engineering

At Red Hat, we connect an innovative community of customers, partners, and contributors to deliver an open source stack of trusted, high-performing solutions. We offer cloud, Linux, middleware, storage, and virtualization technologies, together with award-winning global customer support, consulting, and implementation services. Red Hat is a rapidly growing company supporting more than 90% of Fortune 500 companies.

The Release Engineering team is looking for an intern. In this role, you will streamline tooling, improve solution releases, and guide team processes. We offer different type of experience on different fields, such as: Cloud, Linux, middleware, storage and virtualization technologies. We'll need you to have passion for technology and development, balanced with the responsibility of improving the processes and procedures that support releases. As a "Software Engineer", you'll work in a fast-paced and sometimes chaotic environment, with the goal of making our end users and customers more effective with each release.

Responsibilities:

- basic python skills
- git, rpm, docker are a plus
- able to learn and adapt quickly

Work closely with release engineers to automate their daily tasks:

- create python scripts to implement the use cases
- create unit tests and integration tests
- keep documentation up-to-date and ideally part of source code
- prepare docker containers with the code for testing and training's

Send your applications with enclosed CVs in English to Tereza Ticha
