OpenStack Engineer Internship

Red Hat OpenStack Engineering is looking for a candidate to join their Networking team. The team is globally distributed and comprised of talented, autonomous, empowered and passionate individuals with a healthy work/life balance. The candidate will work on OpenStack networking projects such as Neutron and LBaaS. The candidate will write and review code while working with upstream community members and fellow Red Hatters.

A demonstrable Software Engineering record is mandatory, in the form of professional experience, significant personal projects or open source contribution.

Knowledge in the following topics would be advantageous:

- Python
- Networking knowledge and terms such as L2, L3, ARP and IP
- Cloud networking knowledge; for example VXLAN tunneling, network namespaces and OVS
- Virtualization technology, cloud and infrastructure as a service

Responsibilities:

- Participate in upstream development
- Review code
- Resolve bugs
- Draft design documents
- Implement features
- Participate in design discussions
- Improve our testing infrastructure
- Assist in RPM packaging

Requirements:

- Studying Computer Science or equivalent
- Excellent English verbal and written communication skills
- Comfortable communicating and collaborating with upstream community members outside of the team and company

Send your applications with enclosed CVs in English to Tereza Ticha at tticha@redhat.com. Please name email "OpenStack Engineer Internship".
