## Internship – Security Controls

Red Hat Security Engineering team is looking for a student interested in the latest technologies like containers and Fedora Modularity efforts - <https://docs.pagure.org/modularity/> to help us with modularizing our SELinux policy delivery focused on new concerns around dependency management. You will get familiar with SELinux Policies and with SELinux Userspace Tooling written in C and Python. This work is based on the collaboration between various team in Red Hat around the world. You will have a chance to work with skilled engineers every day.

### Responsibilities:

- Analyze and solve given tasks
- Develop new features, fix bugs, help with root cause analysis
- Test newly added features

### Requirements:

- Student in an Information Technology related area
- C and Python programming skills
- Eager to continuously learn new technologies
- User level experience with Linux
- Scripting experience in Shell
- Communicative level of English
- Professional communication skills
- Familiarity with open source projects
