Internship – oVirt Networking

Red Hat Virtualization team is looking for a student interested in network configuration in Linux to help us design and improve oVirt networking. ovirt.org is an established open-source management system for KVM-based virtual machines. As an intern here, you would join a multinational development team and contribute to this multi-language (Python, Java, bash, goLang) project. You would have the opportunity to fix bugs, develop features, design future architecture, test your code thoroughly, interact with code reviewers, answer questions of users and document your code. In particular, I am looking for someone who is Linux-savvy and could implement new network-related feature in Python and Java.

Responsibilities:

- Analyze and fix bugs
- Develop new features, fix bugs, do root cause analysis
- Test newly added and existing features

Requirements:

- Student in an Information Technology related area
- Python or Java programming skills
- User level experience with Linux
- Scripting experience in Shell
- Communicative level of English
- Professional communication skills
- Familiarity with open source projects

Send your applications with enclosed CVs in English to Tereza Ticha at tticha@redhat.com. Please name email “oVirt Intern”.
