Internship – DevOps automation in Linux

Red Hat Quality engineering team is looking for a student interested in maintaining and developing tools for automated testing of Red Hat Enterprise Linux updates. You will learn how we develop and test a major Linux distribution. You will work on tooling that helps Quality Engineers test automated rpm package upgrades.

Responsibilities:

- Monitor automation tools
- Develop new features, debug issues, fix bugs
- Respond to engineers' requests

Requirements:

- Student in an Information Technology related area
- Experience with Linux command line
- Knowledge of RPM package management
- Scripting experience in bash
- Programming in python is a benefit
- Communicative level of English

Send your applications with enclosed CVs in English to Tereza Ticha at tticha@redhat.com. Please name email "DevOps Automation in Linux".
