Internship – Thermostat developer in OpenJDK QE

Red Hat OpenJDK QA team is looking for two students interested in depths of java. You will have an opportunity to work on real-life complex issues of such huge project as OpenJDK definitely is. You will have a chance to work with best java engineers on world every day and you will be *growing* under their close teaching and guidance.

Thermostat developer

In this position, you will be helping thermostat team - <http://icedtea.classpath.org/t> - with development. Thermostat is tool for inspecting running JVM, and after 5years of development is already stable project used to get interns on board. As a developer, you will be responsible for bugfixes, developing new features and communication with Thermostat QE here in Brno. If you prove yourself, this position should be gateway to full/part time java engineer

Requirements:

- Student in an Information Technology related area
- huge commitment to coding, you will work on your own (with senior leadership of course)
- java in advanced level, together with surrounding technologies like maven
- Eager to continuously learn new technologies
- User level experience with Linux
- Communicative level of English
- Familiarity with open source projects

Send your applications with enclosed CVs in English to Tereza Ticha at tticha@redhat.com.

Please name email “Thermostat developer in OpenJDK QE”.
